Abhijit Mondal

Full-Stack Developer || B.Tech in CSE

abhijitamp378@gmail.com | 9832192588 | Kolkata, India | linkedin.com/in/abhi5404 | github.com/abhi5404

PROFILE SUMMARY

Fourth-year Computer Science undergraduate with hands-on experience across the full software development lifecycle (SDLC) — from requirement analysis and architecture to deployment. Skilled in Java, Python, JavaScript and SQL-based databases, with a strong foundation in Data Structures & Algorithms, OOPs, DBMS and Computer Networks. Proven track record of independently building and shipping full-stack AI products, working in Agile sprints, and collaborating on cross-functional problem-solving — eager to bring this technical and analytical foundation to a client-facing technology consulting role.

EDUCATION

Netaji Subhash Engineering College
B.Tech in Computer Science & Engineering - 7.53 CGPA — Aug 2023 - Present

Ahmadpur Joy Durga High School
Higher Secondary (Class XII - PCMB) - 94.20% — 2022

Nirisha J.M.K. High School
Secondary Education (Class X) - 86.14% — 2020

SKILLS

Programming Languages : C, C++, Python, Java, JavaScript, SQL

Full-Stack Web Development : MERN Stack (MongoDB, Express.js, React.js, Node.js), Tailwind CSS, REST API Design

Databases : MongoDB, MySQL, Firebase, Supabase

Tools & Platforms : Git, GitHub, AWS, Vercel, Render, Postman, Docker, JIRA

Core CS & Practices : Data Structure & Algorithm, OOPs, OS Fundamentals, DBMS, Computer Network, SDLC, Agile Methodology, Unit Testing

PROJECTS

MindCare – Digital Mental Health Platform [Live Demo]

- Built a MERN-stack mental health platform following SDLC and Agile sprint practices, with AI-assisted emotional support and wellness tracking features.
- Developed an empathetic AI chatbot with sentiment analysis, improving emotional detection accuracy by 55%.
- Implemented psychologist appointment booking, mood tracking, and AI-curated wellness recommendations.
- Designed scalable, well-documented backend REST APIs and responsive dashboards, improving platform performance by 45%.
- Used Postman for API testing and validation to ensure reliability across modules before deployment.

ORvexia – Agentic Workflow Architect [Live Demo]

- Developed an AI-powered workflow automation platform that converts natural language into automated workflows, reducing manual setup time by 70%.
- Built a drag-and-drop workflow builder using React Flow with real-time execution logs via Socket.io.
- Integrated LangGraph, LLMs, and 10+ third-party APIs including Gmail, Slack, and Notion using OAuth 2.0.
- Implemented self-correcting execution loops and structured error handling, improving workflow reliability and automation efficiency by 40%.
- Followed iterative, requirement-driven development cycles to plan, build, and test each workflow module.

EXTRACURRICULAR ACTIVITIES

- Participated in multiple hackathons and technical events focused on AI/ML, Web3, and cloud technologies.
- Solved 350+ DSA problems on LeetCode and GeeksforGeeks using Java and C++, strengthening core programming and problem-solving fundamentals.
- Secured Rank 1 in Algothon, a competitive programming contest organized by GeeksforGeeks at college level.
- Cleared TCS CodeVita Round 1 (2025) with a Global Rank of 5895.
- Contributed to open-source projects and actively maintain development work on GitHub.
- Regularly explore emerging technologies including GenAI, LLMs, cloud infrastructure, and agentic AI systems.
